5. DEĞERLENDİRME / *EVALUATION*

5.1. PROGRAM ÇIKTILARI ÖLÇÜM SONUÇLARININ DEĞERLENDİRİLMESİ / *EVALUATION OF PROGRAM OUTCOMES MEASUREMENT RESULTS*

In the spring semester of the 2023-2024 Academic Year, it was monitored whether the program outcomes were supported or not, taking into account the qualifications of the previous academic year. In the 2022-2023 academic year, deficiencies were detected regarding program outcomes c, f and h, and it was decided to monitor the courses that support these outcomes. As of today, as a result of this follow-up, sufficient success has been achieved in all courses supporting the program outcomes. In order to maintain this situation, program outcomes and course outcomes will continue to be monitored meticulously in the coming academic years.

5.2. EĞİTİM AMAÇLARININ DEĞERLENDİRİLMESİ / *EVALUATION OF EDUCATIONAL OBJECTIVES*

The questions prepared by the Faculty of Law QME team were shared with the Advisory Board to determine whether the educational objectives were achieved. The answers to the questions from the Advisory Board are shared below:

- **Yunus Emre Bakiler, graduate, Özgür, Ünüvar, Bakiler Law Firm**

How are the current educational goals in line with the mission and vision of our faculty?

Do you think it overlaps? Do you think current training goals need any changes to better meet industry needs and expectations?

I think that educational goals are compatible with the mission and vision.

1. How effectively does our curriculum support achieving educational goals?

Do you think the curriculum covers the basic knowledge and skills needed in the sector? Are there any gaps in the curriculum that need to be addressed to better prepare students for their careers?

I think the curriculum largely covers the basic knowledge and skills needed in the sector. However, we know that the current Faculty curriculum does not cover all the topics planned to be asked in the Legal Professions Entrance Exam. I understand that this deficiency will be corrected. In addition, elective courses

You can find my thoughts on the lack of information under my answers below, I think it is related to this question.

2. How well do our graduates demonstrate the knowledge and skills specified in their educational objectives?

I think that they demonstrate well the knowledge and skills other than the educational goal stated as highly ethical in their educational objectives. There is no course offered in our faculty, especially in the field of "legal ethics", that is comparable to its counterparts abroad. For this

reason, new graduates need to consider important issues in professional practice, such as legal professional ethics, or academic research and work ethics, when they take their first steps into these professions.

3. In your opinion, what are the strengths of our graduates in terms of qualifications and industry readiness? Are there areas where our graduates lack competence or need further development?

Although this is entirely my personal opinion, I think Bilkent students have three main strengths that distinguish them from other faculty graduates in the industry: (i) reasoning skills, (ii) command of English, and (iii) a determination that comes from graduating from the best law school in Turkey. Incoming appetite for learning. I can say that 90 out of 100 Bilkent graduates have these strengths.

The area where they need improvement is related to their ability to exercise reasoning and practical thinking skills. I have included my suggestions regarding this below.

4. What are the key qualifications and skills that your industry expects from new graduates?

To what extent do our graduates meet sectoral expectations? How well do our graduates adapt to changes and developments in the sector? Are there new trends or skills in your industry that should be included in our training objectives and curriculum?

I think it is possible to list the basic qualifications and skills that the sector I work in (lawyer) expects from new graduates as follows:

(i) The notion of law. This is a skill that is formed not by memorizing the textbook or studying to pass the exams, but by understanding the lesson. In my opinion, this is the most important competence that may be a "natural talent" in a law school student, so some graduates will have less of it, some will have more of it, but in any case, it will develop with a good education. From the notion of law, what we understand is that when a trainee lawyer faces a question, problem or event, he internally at least knows which source to start by looking at, and in its most developed form, he forms an internal opinion regarding the answer or solution.

(ii) Reasoning skill. What we understand from reasoning skill is the ability to apply legal rules to a concrete event or chain of events, as well as the ability to analyze a concrete event and determine the legal rules that should be applied to it, and to find the more reasonable one in case of conflicting rules or precedents.

(iii) Foreign language skills. Speaking is a skill that can be improved with practice. However, the other three basic abilities of reading, listening and writing must be present. What we expect from reading skills in a foreign language is to be able to read an English text at the same speed as one reads a Turkish text, or at a similar speed, excluding the need for a dictionary/resource for terminology that one may not be familiar with. What we expect from listening skills is to be able to listen to an English speaker comfortably enough to take notes while listening, excluding possible problems related to the speaker's accent. What we expect from writing skills is to master basic grammar rules when writing or translating an English text. Legal terminology is updated and can even change from office to office, and terminology is

inevitably taught in practice, but it is almost impossible for an office to teach grammar through feedback.

iv) Self Discipline. Each office strives to maintain in-office discipline with methods specific to its own corporate culture – each office establishes a culture by stretching or tightening on issues such as working days, working hours, dress codes, in-office hierarchy. In this respect, an office's method of ensuring discipline may differ from other offices. However, we expect new graduates to have "self-discipline" in any case - this understanding of self-discipline can be summarized as caring about the work done and contribution to the work done, being careful, using working time efficiently and not giving up easily in the face of a difficult issue. Self-discipline is a skill acquired both in the family and through education up to university.

I think the fact that evaluations are based on reasoning rather than memorization is very effective on the self-discipline of law graduates. Since law courses are technical, difficult and numerous, it becomes quite difficult to graduate with a meaningful GPA and notion of law without establishing a sense of self-discipline.

(v) Teamwork. There are hundreds of different views on what teamwork means – the one that comes to my mind most is, in the words of a coach in a training we received, "getting stuff done" (I couldn't write the word he used instead of stuff). Being a part of a team means working together with subordinates, equals and superiors, more or less skilled people to bring a job from the starting point to the finishing point, and while doing this, the result that will emerge with the contribution of each team member can be greater than the individual sum of these contributions. "Let me do my own thing and retire" is an issue that makes working in our sector very difficult. Ask intern candidates what they understand when it comes to team play in their interviews– "everyone does their own job to the best of their ability" is unfortunately the answer we get most often. It is very important to understand team dynamics, learn to take initiative, own the team's product, and be able to share in both success and failure. Bilkent graduates always made a difference in the first four of these five basic qualities.

However, I would like to point out that in recent years we have observed a considerable loss in these skills compared to graduates of other universities. Most lawyers attribute this to the fact that students spent part of their university life in front of a screen due to the pandemic.

If our Faculty agrees that this may be the reason, this is a problem that will solve itself in the short term. However, if this is not the reason (or if other stakeholders of this study suggest a different reason), it may be useful to evaluate it separately. I think that the "do it together" studies and presentations given at the Faculty regarding teamwork skills are not very developmental.

As you may have already experienced, in such exercises most of the work is done by one or two members of the team. Collaborative studies can be structured differently – we certainly have academics who do this differently.

He or she often masters his/her study skills by participating in compulsory extracurricular activities – namely competitions, debating tournaments, Model United Nations studies or organizations such as ELSA.

In general, I think it can be analyzed how Bilgi Hukuk implements Bilgi University's "learning by doing" model in order to create and develop these skills of students. The abundance of elective courses and the teaching models in these elective courses are based entirely on dividing classes of 30 - 40 people into teams of 5-6 people, working these teams on concrete events and giving feedback. I have included two examples from Bilgi Hukuk below:

Example 1: In an elective course on corporate law, 30 students are divided into 5 teams and these 5 teams play a Monopoly game with differentiated rules for a semester. Each student starts with a certain amount of money at the beginning of the course. Each team establishes a company with all or some of the money it has. It determines the operating principles of the company and elects a manager. Meanwhile, company establishment - general assembly decision quorum - board decision quorum are studied. Every week, each player receives a certain amount of money from the bank. If he wants to put this money into the company, he can increase the capital and get more shares. He can buy the shares of a player in another company. In such cases, they prepare very simple transaction documents. At the end of each month, they prepare a "balance sheet" and evaluate the performance of the Board member. It is extremely open to students' creativity as it is clearly stated what cannot be done rather than what can be done. The task of the instructor teaching the course is to follow the moves of the teams and to discuss issues related to corporate law with all students and get their opinions. Students receive grades for both class participation and active participation in the course.

I think that this and similar types of elective courses will enable students to experience the practical dimensions of the fields they may be interested in, even in the Faculty environment, and to develop their notion, reasoning, foreign language and team game skills.

5. How can we improve our collaboration with industry to ensure our training program remains relevant and up-to-date? I think that the number of elective courses can be increased and practitioners and/or academicians who are competent in their fields can be invited to teach elective courses. TOBB Law may be a good model when it comes to elective course "insistence" - some of the elective courses are filled to the brim, while some courses consist of classes of five or six students, but these courses are still offered. Especially the sector that will teach courses such as elective courses

I don't think its members will do this with the expectation of financial income. In order not to disproportionately increase the workload of the faculty's current teaching staff, I think elective courses can best be provided through sector cooperation. From the sector to both specialized subjects (maritime

I think that the demand for courses (e.g. law) and "deep practice" elective options of existing courses can be easily met. I always thought that one of the features that made Bilkent Law School - when we were its students - was that courses such as intellectual property and competition law, which were not seen in other faculties, were given as compulsory and enabled the students to understand the concept of law. I understand that the number of compulsory courses has been reduced due to the demands of the Rectorate and the heavy credit load of the students and that some of the compulsory courses are given as elective courses while we are studying. However, I think this and similar courses should definitely remain elective and be offered even if there is low demand.

- **Alperen Afşin Gözlügöl, LSE Law School, Assistant Professor**

One of the most distinctive features of Bilkent Law School for me was that it trained a versatile intellectual. In addition to the fact that the legal education it provides is of the highest quality, students are provided with a versatile education and ability to think with finance, accounting, philosophy and human sciences courses and other law courses taught in English. In this respect, it would be useful for educational goals to emphasize this versatility.

On the other hand, while the Faculty tries to keep up with the realities of the country, it should not overlook the developments in the world and support students in research and education on this subject. In this respect, I think that educational goals need to be adapted to educate students to respond to, keep up with, and address life-changing developments in the world. These developments include, for example, revolutionary developments in artificial intelligence and issues such as climate change, which the world will struggle with in the coming years. In particular, developments in artificial intelligence concern both the effectiveness of students in using models such as ChatGPT and their chances of finding a job in the future (especially considering that most of the work done by lawyers can be done with the same efficiency by these models).

1. How effectively does our curriculum support achieving educational goals? Do you think the curriculum covers the basic knowledge and skills needed in the sector? Are there any gaps in the curriculum that need to be addressed to better prepare students for their careers?

This issue has been discussed before within the scope of the core curriculum and the bar exam.

2. How well do our graduates demonstrate the knowledge and skills specified in their educational objectives?

Bilkent law students are highly successful in their preferred career options and can continue their careers to the highest levels in national and international institutions. They stand out especially in terms of their knowledge of foreign languages, their legal training and personal relationships. Bilkent law students are particularly successful in terms of domestic and international academic careers.

3. In your opinion, what are the strengths of our graduates in terms of qualifications and industry readiness? Are there areas where our graduates lack competence or need further development?

Their strengths: the legal formation and education they received, foreign languages, versatility, reasoning ability.
